

ADVANCED COMPUTERIZED TESTING

In our continuing efforts to assure the best in patient care, Dr. Barry's Office is happy to offer you the latest in computerized technology that help provide EARLY DETECTION of eye diseases. These diseases include GLAUCOMA, DIABETES, MACULAR DEGENERATION, BRAIN TUMORS, ANEURYSMS and other neurological problems.

These additional tests include one we can provide here in our office for you:

1. OPTOMAP RETINAL EXAMINATION

Enables the doctor to perform a thorough retinal screening examination WITHOUT DILATION. Retinal screening with this advanced photography initially REPLACES DILATION. No blurry vision!

An excellent way to provide baseline information to evaluate any possible changes.

2. VISUAL FIELD EXAMINATION

Helps detect early onset of decrease in peripheral fields that can lead to glaucoma or macular issues.

Unfortunately, health insurance plans DO NOT cover these tests. **The fee for these additional tests is \$39.00 for Optomap or \$59.00 for both tests. The doctor will talk to you about your individual needs.**

The importance of this screening is paramount to the health of your eyes and will be administered unless you inform Dr. Barry that you wish to opt out during your eye examination.

I have read and understand the above.
